

## 2020 UK-JAPAN CAMBRIDGE YOUNG SCIENTIST WORKSHOP

University of Cambridge 19-25 July 2020

We are delighted to invite a **teacher and 4 students** from your school/academy/college to apply to participate in the 2020 UK-Japan Young Scientist Workshop hosted at Cambridge University.

Students must be **aged 16 or over** at the time of the Workshop. They should be chosen by you as being those who would gain most from the experience, both in terms of their academic ability and in their interest in the international dimension.

Through our UK-Japan Young Scientist Workshops, we enable British and Japanese students to discover, by living and working together with cutting edge scientists and engineers, a new vision of the world they are entering, of the challenges and opportunities science and engineering are opening to them, and of their own futures as global citizens. We have run 24 of these Workshops since 2001 and they have had immense impact on the 1200+ students involved.

**Cambridge University:** We have run UK-Japan Young Scientist Workshops with Cambridge scientists and engineers each year since 2010. Once again we will be living in Murray Edwards College and the Kaetsu Centre (on the Murray Edwards campus), with projects taking place across the academic departments of the university.

**Costs in Cambridge:** We ask for a contribution of £750 per **student** to cover everything in Cambridge including accommodation and meals in Murray Edwards and the final Workshop Dinner in Christ's College (but not snack lunches which are taken with the research groups; college breakfasts and dinners are very substantial). We offer the **teacher** place free of charge provided the student places are fully paid. If not we ask for a contribution from the school. We will ask for a deposit of £70 per student when schools initially sign up to take part.

**The cost per student is already heavily subsidised to make it more accessible.**

**We are keen to include as many able students from disadvantaged backgrounds as our very limited resources allow, and so please send us details of any such student you nominate whose financial circumstances would prevent their attending without assistance for us to consider.**

Several schools engage in some creative fund-raising by the students throughout the year and use this as an opportunity for team building. From past experience we know that it is often very possible for schools and indeed the students themselves to raise significant funds for such a worthy cause from local sources and on line if they start early.

To register interest now and for further information please contact  
Angus Gregson, Clifton Scientific Trust at
