

2020 UK-JAPAN Tohoku Young Scientist Workshop

Depart Heathrow 31 July, return 10 August 2020

We are delighted to invite **a teacher and 4 students** from your school/academy/college to apply to participate in the 2020 UK-Japan Young Scientist Workshop hosted at Tohoku University.

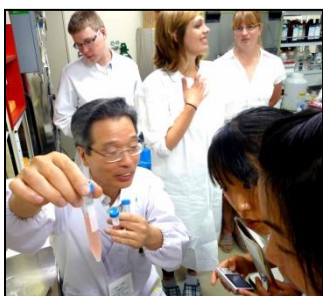

At the time of the Workshop, students must be **entering Year 13** and should be chosen by your school as being those who would gain most from the experience, both in terms of their academic ability and in their interest in the international dimension.

Through our UK-Japan Young Scientist Workshops, British and Japanese students discover, by living and working together with cutting edge scientists and engineers, a new vision of the world they are entering, of the challenges and opportunities science and engineering are opening to them, and of their own futures as global citizens. We have run 24 of these Workshops since 2001 and they have immense impact on the 1200+ students involved.

Tohoku is one of Japan's National Seven Universities. It is considered one of the most prestigious universities in the country, and one of the top fifty universities in the world. Tohoku was also the region badly affected by the tsunami in 2011. We have learned much from students from that area in previous workshops.

Tohoku Costs: The cost will be £2500 per **student** to (to cover flights and everything in Japan apart from some personal expenses). We offer the **teacher** place free of charge provided the student places are fully paid. **This makes a package for four students and a teacher for £10k.** We will ask for a deposit of £250 per student when schools initially sign up to take part.

The cost per student is already subsidised to make it more accessible.

We are keen to include as many able students from disadvantaged backgrounds as our very limited resources allow, and so please send us details of any such student you nominate whose financial circumstances would prevent their attending without assistance for us to consider.

Several schools engage in some creative fund-raising by the students throughout the year and use this as an opportunity for team building. From past experience we know that it is often very possible for schools and indeed the students themselves to raise significant funds for such a worthy cause from local sources and on line if they start early.
